Troubleshooting31 Quick Check List31 Contoller Inoperable, Display Blank33 All Lights Lit on Contoller34... Page 4 Section 1. Important Safety Instructions READ AND FOLLOW ALL INSTRUCTIONS Lire la notice technique. All electrical work must be performed by a licensed electrician and conform to all national, state, and local codes. When installing and using this electrical equipment, basic safety precautions should always be followed, including the following: DANGER To reduce the risk of injury, do not remove the suction fittings of your spa or hot tub. Page 5 Page 5 WARNING People with infectious diseases should not use a spa or hot tub. To avoid injury, exercise care when entering or exiting the spa or hot tub. Do not use drugs or alcohol before or during the use of a spa or hot tub to avoid unconsciousness and possible drowning. Page 6 Section 2. Control Panel Overview Indoor Control Panel The indoor control panel serves as a means of turning equipment on and off, entering programs to run equipment automatically at selected times, and displaying what is going on in the rest of the system. Programs (and other information entered through the controller) are stored in a memory chip on the power center board, even during a power interruption (however long). Page 7 Page 7 Figure 1. All Button Controller (Front View) Jumpers for Display Module Multiple Controllers Controller 1 Controller 3 Controller 4 Controller 2 Jumper Settings for Micro Controller Multiple Controllers Figure 2. All Button Controller (Back View) Figure 3. OneTouch Controller (Front View) Reset Switch* Page Up/... Page 8 Section 3. Controller Diagnostics The Aqualink system has an internal self-checking process, which can display its current status on the indoor control panel. Use the following steps to get to this "diagnostics" information: 1. All Button: Use the buttons along the lower left side of the controller. a. Page 9 Page 9 Possible Online As Shown in Possible Unit Unit Order** Earliest PPD Devices Diagnostics While Numbers Important? Revision Usable Online All Button CONTROL PANEL 1,2,3,4 Aqualink PC CONTROL PANEL 4 Yes** OneTouch ONETOUCH 1,2,3,4 OneTouch** Serial Adapter SERIAL ADAPTR 1,2. PHASTLink Serial... If the secondary voltage is 24 to 28 VAC, turn off the power. e. Remove the fuse from its holder and do a continuity test. If there is no continuity, unplug all the Jandy Valve Actuators (JVAs), replace the fuse (3.15 amp), and turn on the power. If the fuse blows with all JVAs unplugged, the circuit board is damaged and needs to be replaced. Page 11 Page 11 Check for broken or loose wires on terminals 1 and 4 Green (red and green) of the red Wire Wire 4-pin terminal bar. 4 3 2 1 4 3 2 1 6 5 4 3 2 1 10 9 8 7 6 5 4 3 2 1 RS6 &... Page 12 Page 12 3.2.2 Control Not Communicating with Power Center PCB The following conditions indicate that the control is not communicating with the power center PCB: 1. All Button Control: All the circuit LEDs are illuminated and the display is locked on a part number and revision letter. Page 13 Heater Operation The pool and spa heater LED and the solar LED are two-color LEDs. Green indicates the heater is enabled but not on. Red indicates the signal to the heater relay is being sent. A heater or solar LED will remain green for the following reasons: 1. Page 14 Section 4. Power Center Overview The power center PCB is the true brain of the system. The micro-controller on the PCB is constantly sending signals through the communication wires to the control panel and polling the system to determine which circuits should be on and which should be off. Page 15 Power Center Troubleshooting 4.2.1 Loss of Power Check the power center transformer for the proper voltage. 1. Disconnect the transformer from the power center PCB. Check the voltage on the secondary transformer (the two (2) outside yellow wires). The two (2) outside wires provide the 24 to 28 VAC to the PCB. 2. Page 16 Main Power Center PCB 4.3.1 PCB Circuit Layout 1. JVA Relays (K2 - K3) 2. Low Voltage Heater Relay 3. 3.15 amp fuse. Fuse will blow to protect the transformer when there is a short circuit in the JVA(s) or the circuit board driver chip is damaged. Page 17 Page 17 4.3.2 PCB Voltages 1. From Power Center to Controller, between terminals one (1) and four (4) of the two (2) red terminal blocks = 8 to 10 VDC. 2. To JVA 2444 = 24 to 28 VAC*. 3. To Relay Coils = 24 to 32 VDC*. 4. Page 18 Section 5. Auxiliary Power Center Overview An auxiliary power center provides control for systems that need to run more relays (and/or JVAs) than can be handled by the main power center. The main one is still the central "brain" of the system; it sends control signals to the auxiliary power center PCB through the 4-wire bus (red connector). Page 19 DIP Switches All DIP switches are located on the left side of the power center bezel. To change a setting, turn off the power and move the appropriate switch from left (OFF) to right (ON). 4 3 2 1 4 3 2 1 6 5 4 3 2 1 10 9 8 7 6 5 4 3 2 1... Page 20 Page 20 DIP Switch # Aux. 1 = Any equipment Aux. 1 = Pool cleaner Aux. 2 = Any equipment Aux. 2 = Low speed for a two speed filter pump. Filter pump circuit becomes high speed. Aux. 3 = Any equipment Aux. Page 21 Water Temperature Sensor 5.3.1 Troubleshooting When the Power Center PCB is put in Service or Time Out Mode, the thermostat setting will automatically be switched to 104° F for testing. If the heater circuit is activated and the water heater temperature is less than 104° F, the LED above the heater button should turn on. Page 22 Page 22 4 3 2 1 4 3 2 1 6 5 4 3 2 1 10 9 8 7 6 5 4 3 2 1 RS6 & RS8 ONLY RS8 ONLY POOL MODE RESET SPA MODE AUTO SPA DRAIN SERVICE HEATER SOLAR... Page 23 3 HP Relay 5.4.1 Operation 1. A standard 3 HP Relay's coil is supplied with 24 VDC from the power center PCB via one (1) of the driver chips. When 24 VDC is received by the relay's coil wires, it closes the contacts that complete the circuit to turn on the equipment (i.e., power supplied to Line 1 goes out Load 1 to the equipment). Page 24 Page 24 4 3 2 1 4 3 2 1 6 5 4 3 2 1 10 9 8 7 6 5 4 3 2 1 RS6 & RS8 ONLY RS8 ONLY RESET POOL MODE AUTO SPA MODE SPA DRAIN SERVICE HEATER SOLAR... Page 25 Two Speed Relay 5.5.1 Operation The two speed relay operates in conjunction with a standard relay to operate a two speed pump/motor. The standard relay is the on/off relay and the two speed relay is the switching relay. Activating the relay coil for the standard relay will complete the contact circuit between Line 1 and the motor common. Line 2 and the two speed relay common. Page 26 Page 26 4 3 2 1 4 3 2 1 6 5 4 3 2 1 10 9 8 7 6 5 4 3 2 1 RS6 & RS8 ONLY RS8 ONLY RESET POOL MODE AUTO SPA MODE SPA DRAIN SERVICE HEATER SOLAR... Page 27 Light Dimming Relay 5.6.1 Operation The controller signals the light dimming relay to turn "fully on", "partially dimmed", or "completely off" by sending a specific number of pulses in a set period of time to the light dimming relay. The circuitry of the light dimming relay, which requires 120 VAC to operate, interprets the number and timing of pulses to determine whether the light should be on, off, or dimmed. Page 28 Page 28 Specifications Voltage: 12 to 120 VAC Wattage: 1000 maximum Note: a maximum of four (4) light dimming relays can be installed in each power center. Note A Standard Relay can be mounted (piggybacked) on top of the Dimmer Relay to allow for a total of eight (8) Relays in Power Center. Page 29 Section 6. Jandy Valve Actuator Operation One leg of a 24 VAC transformer secondary supplies voltage to the common terminal of a SPDT (single-pole, double-throw) relay. The N.C. (normally closed) terminal of that relay is connected to the red wire of the JVA cord, and the N.O. Page 30 Page 30 Figure 23. JVA Internal Wiring... Page 31 Section 7. Troubleshooting Quick Check List Symptom Problem Possible Solution Power Center override switches Mis-wired four (4) conductor wires.
