## Samsung galaxy a5 2017 android pie update

It seems that the Android Pie update may now be rolling out to the unlocked Samsung Galaxy S9 carrier in the US. The update was spotted on Reddit, at PhoneArena, and via advice from one of our readers (we couldn't verify the claim, but the evidence is up). The update was for the S9 standard as well as the Galaxy S9 Plus, with this latest update coming to over 1.7GB. It includes the January 2019 security patches and updates the operating system to Samsung's latest Android skin version, One UI. You can find out more about what exactly this offers in our handy coverage here. Reddit Sometimes these updates roll out to a small set of users before a wider deployment starts a little later, so treat this with caution until we learn more. If that's the real deal, however, it would bring a close to major U.S. pie deployments for these devices, along with T-Mobile, AT and T, Verizon, and Sprint have also rolled out the update recently. Have you received an update to your Galaxy S9 or S9 Plus unlocked in the US? Let us know in the comments. Tagged: Samsung Samsung Samsung Galaxy S9 is finally rolling out android pie updates on air for the Galaxy S9 and Note 9 outside its initial test markets. However, there is a catch. (Image credit: Tom's Guide) Currently, in the U.S., only Xfinity Mobile models of the S9 and S9 are receiving the OTA update, according to Droid Life. This includes one ui, which is Samsung's next-generation user interface. Versions for other carriers, as well as unlocked devices, were supposed to be part of the initial deployment in January, but it looks like they will arrive late at this point. This news comes about two weeks after SamMobile fan site reported that South Korea and India had joined Germany and the United Arab Emirates to get the update to Android Oreo to the Flavor of Samsung Pie. OneUI brings a bunch of features you won't find in Pie's stock installation, including dark system-wide mode and a layout designed to make large screens more manageable and useful. If you have a Galaxy S9 or Note 9 and you're curious if the update can be available to you, you can check manually. Go to Settings, select Software Update and select Download Updates Manually to see if you can update now. Don't do it if you use a Galaxy S8 and Note 8: this update would have come in the course of March. Samsung Galaxy S10 Rumors: Release Date, Specifications, and more despite the fact that it is one of the largest smartphone providers in the world, is not too eager to provide quick Android OS updates. Just about every major Samsung smartphone released in the last year or two will get it from 2019. Last month, we reported Samsung began rolling out the Android Pie update to the Galaxy S9/S9, but not everyone has it yet. The same goes for the Galaxy Note 9, which would have started receiving the update a week ago. However, the deployment may have been just a test. Even though the update has been labeled as a stable build, it's only Germany. Samsung initially stated that the Galaxy Note 9 will be updated on Android 9 Pie from January 15, but the update may have been delayed. As androidauthority points out, Samsung's Turkish portal Guncelmiyiz has just updated the Android 9 Pie roadmap and the Galaxy Note 9 update will instead be pushed from February 1, two weeks later than it was originally announced. Well, a two-week delay isn't too much of a problem if it prevents galaxy note 9 users from getting a buggy update. Of course, even if Samsung kicks off the rollout in early February, it will take some time for the update to arrive in all countries. SUBSCRIBE TO OUR NEWSLETTER! Last week we reported on the Galaxy Note 9 Android Pie deployment update in Germany, suggesting that this was the beginning of its major rollout. However, this may not be the case, as Samsung Turkish portal Guncelmiyiz indicates the update will instead roll out from February 1st (via Nashville Chatter). The Guncelmiyiz website, which Samsung owns, has updated estimates for many of the company's devices. It is currently said that the Galaxy Note 8, S8, and S8 Plus Pie updates will be rolling out from February 15 and he has already said that the Note 9 Pie update would roll out January 15. The Update of the Note 9 has obviously been delayed, as you can see in the screenshot below. Guncelmiyiz These delays tend to fluctuate and rarely appear in all regions at the same time. Nevertheless, there's a good chance you won't see the Note 9 update until February now, no matter where you are. That's unless you're a beta user. Samsung began rolling out the update to some of those on its beta program in Germany around January 4. As it has deployed previous updates like this for beta and non-beta users, we suspected Samsung can do the same again. This does not seem to be the case, but it can still deploy the upgrade to users on its beta track before regular users. This is just an additional 95MB download, after all. Tagged: Samsung Android Samsung Galaxy Note 9 AT T started sending Android 5.0.1 to Samsung Galaxy S4 on Tuesday. This means that if you are an AT customer T with the device, keep your eyes open for the update. This is a fairly heavy file, weighing at 947MB in size. The code scanner, browser bar and Softcard apps of the Galaxy S4 are removed from the phone with this update, which has a number of data generation LRX22C.1337UCUGOC3. The adds new hardware design user interface, battery features, including a longer lifespan of battery and time left to recharge data, and the ability to access the Quick Settings menu with a two-finger swipe down from the top of the screen. Priority mode only allows certain types of notifications to read, and the Smart Lock allows you to pair your phone or tablet with a secure device like a car or laptop. Because the update is quite important, AT and T requires that you are connected to a Wi-Fi pipeline when downloading and installing. And when it comes to your battery, you need to make sure that your is billed at least 50% before starting the update process. Because the update comes out in waves, it might not reach your phone for a few days. So if you're looking for Android 5.0.1 on your AT T branded Samsung Galaxy S4 and it is not there, there is no need to panic. The update will eventually hit your phone. Source: AndroidCentral Subscribe to OUR NEWSLETTER! If you have a Galaxy S9 and have decided to sign up for Samsung's beta program, you should now see a new Android Pie update on your phone. If you are just waiting for the South Korean company to release the final version, we will let you know how the update is progressing and whether or not Samsung addresses any issues reported by Galaxy S9 users. Now this would be the third android pie beta update that Samsung Galaxy S9 is getting in the US. As sammobile points out, the latest update is all about bug fixes and optimizations, which should further improve the performance of the Galaxy S9 when running Android Pie. Among the most important bug fixes, the changelog mentions call application accidents when searching for unregistered names in the search bar, Data route doesn't work abroad, dialer freeze, and much more. You can find the entire list of bugs that have been addressed in this beta in the screenshot attached to the article. Keep in mind that the update, which weighs at 590MB, adds the December security patch as well. In the same piece of news, Samsung announced that the first Android Pie update for the Galaxy S9 /S9 will fall early next year, so it won't be long now. SUBSCRIBE TO OUR NEWSLETTER! Newsletter!
