Sentence starters for evidence in science

This sentence starter helps students adjust their ideas and evidence when explaining the phenomenon. Students work as a pair or group and determine what evidence from the activity is best suited (or argued) to strip sentences. Each group can use these strips (a longer, more multi-day process) to create a full description, or the description can be written as a class with each group that specializes in two claims, along with reconciliation evidence (and inference). Start making claims for students to tell scientific stories, and then add them to evidence and inference pieces. Research requires us to scrutinize information and assess its credibility. Therefore, when you think about various phenomena, review empirical data and give a detailed explanation that justifies the interpretation. An essential component of our research narrative is supporting evidence and example. The type of evidence we provide may reinforce our claims or leave readers confused or skeptical of our analysis. Therefore, it is important to use a proper and logical phrase that clearly guides the reader from one idea to the next. This article discusses the need to use evidence and examples, and catalog effective language that can be used to support arguments and embedded examples. When you introduce evidence and examples, evidence and examples create a foundation on which your argument steadfastly holds. Without evidence, your argument scarcity of reliability and teeth. But the laundry list evidence is as bad as failing to provide any data or information that can substantiate the conclusion. Therefore, when introducing examples, you should use phrases that provide evidence and clear logic on how evidence supports arguments. When specifying information that is not common sense, arguments should be introduced and linked as evidence. Draw conclusions, deduce, or suggest meaning based on specific data. You need to clarify your previous statements, and you can make your picture more effective. You need to identify representative examples of categories, the desire to distinguish the concept. Emphasize points by emphasizing specific situations. In the literature of use and introductory text to help effectively support the context, we have organized an introduction. Depending on the features below. This list is not exhaustive, but it provides nine types of ideas that you can use. Purpose introduction phrase examples are common sense and non-information statements (using the text citation format of the relevant style guide) [author] shown [authors] found according to, as Smith pointed out in a 2010 study. . . . According to Mark and Peters . . . Drawing conclusions, reasoning, or implying meaning semantics based on a particular data is suggested to be shown on the basis of evidence(suggestions) and can be observed/observed when it is clearly manifested when there is a hinge on strong negative correlations. . . . Evidence / suggestions / marked by their enlarged adrenal patients . . . Based on the self-reported survey results . . . This phenomenon can be seen when the wind speed is exceeded / can be observed. . . . As you can see from the high recurrence rate . . . Causal relationship between A and B, which is evident when B is triggered. . . . The efficacy of chocolate as a cure for misery is demonstrated by the survey results highlighted in. . . . This conclusion depends on. . . . For example, clarifying the previous statement on an example-by-example basis is an example that clearly describes it as a particular thing, that is, this occurrence is rare. For example, only one out of 20 cases. . . . The current population growth rate is not sustainable. For example, some major coastal cities are already suffering. . . . I feel that less than 20% of new marriages are ready through illustrations. . . .
